

FRANK LLOYD WRIGHT FOUNDATION
EDUCATION OUTREACH PROGRAM

The Frank Lloyd Wright Foundation's **Education Outreach Program (EOP)** has touched over 75,000 students and teachers since it was established in the late 1980s. It continues today to expand its reach into school curriculum in grades K-12. Students are immersed in the vivid, culturally influential architecture of Frank Lloyd Wright through unique interdisciplinary enrichment programs administered by its Founder and Director, Ms. Shawn Rorke-Davis.

For the first time, the EOP summer camp will be held in Wisconsin, at Taliesin. For the past 15 years Ms. Shawn Rorke-Davis has conducted camp at Taliesin West, Scottsdale, AZ. This summer the camp will also be offered for grades 5-12 at Frank Lloyd Wright's summer home in rural Wisconsin near the town of Spring Green.

FRANK LLOYD WRIGHT FOUNDATION
EDUCATION OUTREACH PROGRAM

Classes for grades 5-12 unless otherwise noted in the class descriptions on the right. All camps are held at Taliesin West, Scottsdale, AZ, except for the week of 14-18 June when camp will be at Taliesin, Spring Green, WI.

Session 1—AZ June 7-119 AM-12 noon

Photographing Wright

Session 2—AZ June 14-259 AM-3 PM

Ceramics and Sculpture

Session 3—WI June 14-189 AM-12 noon

Design Your Dream Space

Session 4—WI June 14-181-4 PM

Wright and Nature

Session 5—AZ June 21-259 AM-12 noon

Photographing Wright

Session 6—AZ June 28-July 29 AM-3 PM

Design Your Dream Space

(Advanced) – previous experience suggested

Session 7—AZ July 5-99 AM-3 PM

Wright For The Future

Session 8—AZ July 5-99 AM-12 noon

Photographing Wright

Session 9—AZ July 12-239 AM-3 PM

Ceramics and Sculpture

Session 10—AZ July 26-309 AM-12 noon

Photographing Wright

Session 11—AZ August 2-69 AM-3 PM

Design Your Dream Space

Session 12—AZ August 9-139AM-12 noon

Photographing Wright

WISCONSIN

Design Your Dream Space

"Design Your Dream Space" was created as a forum to enlighten students about Wright, architecture, and construction through a personalized, interdisciplinary, hands-on approach. Students are asked to view the world around them in new ways, to understand that architecture is more than just "buildings." It combines art, math, science, and technology to create innovative spaces in which to live, learn, and work. Students design a two-dimensional floor plan to scale, and build a furnished, landscaped 3D model of their space. AZ - \$350 per session includes lunch and all materials. **WI - \$200 all materials—no lunch.**

Wright For The Future

What do you think cities in 2060 might look like? In what major ways would they change from what we know today? Campers develop a visionary, sustainable city for 50 years in the future! You will consider "green" energy sources, new building materials and technologies, sustainability, and other twenty-first century challenges. Teams collaborate on innovative design solutions. Each camper builds scale models turning concepts into reality. \$350 per session includes lunch and all materials.

Photographing Wright

Wright designed far more than just buildings. Campers will discover the composition of space, light and shadow at Taliesin West, and capture it on film. Taught by local artist and photographer Quincy Ross, students learn to select images and how to frame them expressively. Each session will also have a video or guest speaker, a local architect, and/or photographer. Campers only need to arrive with imagination and a curious eye. \$250 per session includes all equipment. NOTE: 7-12 grade (minimum 4 students required per session)

Sculpture and Ceramics

Architecture is sculpture to be lived in. Local artist Brian Maxwell will guide students to experiment with form, texture, and shape using clay. The class will focus primarily on hand building to familiarize campers with clay. Emphasis will be on creating a sculptural item. Campers will also learn mold making and use a potter's wheel. Each camper will have at least one finished piece to take home at the end of this 2-week session. \$450 per session includes lunch and all materials. NOTE: 7-12 grade. Previous experience helpful *Session is limited to 8 campers

Wright and Nature

This project introduces campers to abstract art. The task is to discover geometric shape and pattern in nature. Math and art have many elements in common. Some shapes are subtle, like the curve of a seashell. Others more precise: a honeycomb is a good example. Campers will begin by sketching a realistic image of one object in nature. Intermediate drawings in the process use stylization and abstraction to further refine the image. Tessellation, rotation, mirror imaging, and other methods of inventive repetitive pattern are used to create the full size final art project. The original will evolve into a full color geometric art glass design executed on archival Mylar. **Offered in Wisconsin only: \$ 150 per session.**
